Did you know that 20% of all cases of Multiple Myeloma are in African-American patients?

It's expected that 24% of all newly diagnosed myeloma patients will be African-American.

GCRC invites you to a presentation of The International Myeloma Foundation's (IMF) M-POWER webinars to inform you, and help change the course of multiple myeloma. Person by person, family by family, neighborhood by neighborhood, we can make a difference.

Multiple myeloma is the most common blood cancer in African-Americans, who have a greater-than-average risk of developing and dying from the disease.
